Preface

Medicare Health Outcomes Survey

The Centers for Medicare & Medicaid Services (CMS) is committed to monitoring the quality of care provided by Medicare Advantage Organizations (MAOs). The Medicare Health Outcomes Survey (HOS) is the first patient-reported health outcomes measure for the Medicare population in managed care settings. The HOS design is based on a randomly selected sample of individuals from each participating MAO and measures physical and mental health over a two-year period.

General information about the Medicare HOS Program is available on the [CMS HOS website](#). A full description of the program is available on the HOS website at www.HOSonline.org.

This HOS 2022-2024 Cohort 25 Performance Measurement **Data Users Guide** (DUG) explains the contents of beneficiary-level 2022-2024 Cohort 25 Performance Measurement data files for MAOs. The DUG includes an overview of the file organization, an explanation of derived fields, a table defining the attributes of all fields in the files, and copies of the survey instruments annotated with the field names in the data files.

The *2022-2024 Cohort 25 Performance Measurement Reports*, which are based on these data, were made available to participating MAOs via the CMS Health Plan Management System (HPMS) in July 2025. The MAO reports summarize the results for an individual MAO compared with the national HOS total. The *HOS Sample Performance Measurement Report* is also available on the Sample Reports page of the [Resources](#) section on the HOS website. This report is an example of the reports distributed to the MAOs and describes the program background, methodology, design, and national HOS results. The sample report displays the actual results for the national HOS total but uses hypothetical data for the MAO and state summaries.

Statutory Authority

Section 722 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 mandates collecting, analyzing, and reporting health outcomes information. This legislation also specifies that data collected on quality, outcomes, and beneficiary satisfaction to facilitate consumer choice and program administration must use the same types of data collected prior to November 1, 2003. Collected since 1998, the Medicare HOS is the first patient-reported outcomes measure in Medicare managed care and therefore remains a critical part of assessing MAO quality. In addition, CMS includes the HOS results as a component of the Medicare Plan Finder (www.medicare.gov/plan-compare), a web-based tool that helps inform beneficiaries about Medicare enrollment choices. CMS incorporates new survey components in the HOS, as appropriate, to provide outcome measures that MAOs can use in quality improvement initiatives.

Technical Assistance

Medicare HOS Information and Technical Support at hos@hsag.com or (888) 880-0077 is available to assist with questions regarding the data file. Methodology and Design

2022-2024 Medicare Advantage Organization Participation

MAOs with a minimum enrollment of 500 beneficiaries, and with Medicare contracts in effect on or before January 1, 2021, were required by CMS to administer the Cohort 25 Baseline survey in 2022:

- All MAOs, including all coordinated care contracts, local and regional preferred provider organizations (PPO), Private Fee-for-Service (PFFS) contracts, and Medical Savings Account (MSA) contracts
- Section 1876 cost contracts, even if closed for enrollment
- Employer/union only contracts
- Medicare-Medicaid Plans (MMP)

For MAOs that offered an Institutional Special Needs Plan (I-SNP) and had Medicare Advantage contracts in effect on or before January 1, 2021, the HOS reporting requirements were as follows. Contracts with only one Plan Benefit Package (PBP), or with multiple PBPs that were all I-SNPs, were excluded from the 2022 Baseline HOS. Contracts with at least one non-I-SNP PBP were required to administer 2022 HOS Baseline if 500 or more non-I-SNP members remained in the contract after I-SNP members were removed.

MAOs that administered the Cohort 25 Baseline survey in 2022 were required by CMS to administer the Cohort 25 Follow Up survey in 2024. In the event of a consolidation, merger, or novation, the surviving contract had to report Follow Up HOS for all members of all contracts involved. All eligible members of these contracts were resurveyed, and the results were reported as one under the surviving contract. For a contract conversion, the contract had to report if its new organization type was required to report. Refer to the MAO Performance Measurement Contract List available from the [Survey Results](#) page of the HOS website.

MAOs sponsoring Fully Integrated Dual Eligible (FIDE) Special Needs Plans (SNPs) within Medicare contracts in effect on or before January 1, 2023, and with a minimum enrollment of 50 beneficiaries could elect to report the 2024 HOS or HOS–Modified (HOS-M) at the PBP level for a frailty assessment under the Affordable Care Act. The assessment determined eligibility for a frailty adjustment payment, like the payments provided to Program of All-Inclusive Care for the Elderly (PACE), for FIDE SNPs with a similar average level of frailty to PACE. The FIDE SNP sponsors were permitted to choose whether their assessments would be calculated based on activities of daily living (ADL) items reported in the HOS or on a separate sample of beneficiaries who completed the HOS-M. Voluntary reporting for frailty assessment at the FIDE SNP level is in addition to standard HOS requirements for quality reporting at the contract level.

Sampling Methodology

2022 Cohort 25 Baseline Sampling

CMS identified beneficiaries who were eligible for sampling as follows:

- MAOs with fewer than 500 beneficiaries enrolled were not required to report HOS.
- For MAOs with 500 to 1,200 beneficiaries, all eligible beneficiaries were included in the sample.
- For MAOs with more than 1,200 beneficiaries, a simple random sample of 1,200 beneficiaries was selected.
- Beneficiaries were defined as eligible if they were 18 years or older on the date the sample was drawn. The six months enrollment requirement was waived beginning in 2009, and beneficiaries with End Stage Renal Disease (ESRD) were no longer excluded from the sampling beginning in 2010. Since 2019, MAOs could request a survey sample larger than 1,200. Oversampling was expressed as a whole percentage of the standard sample size. Since 2020, I-SNPs have been excluded at the PBP level from the HOS Baseline.

2024 Cohort 25 Follow Up Sampling

CMS identified beneficiaries from the 2022 Cohort 25 Baseline sample who were eligible for remeasurement as follows:

- Beneficiaries were eligible for remeasurement if they had sufficient data to derive physical health or mental health summary scores at baseline, were not deceased, and were enrolled in the same MAO contract at the time of the follow up sampling.

Beneficiaries were excluded if they did not have summary scores at baseline, had disenrolled from their MAO at the time of the follow up sampling, or died after the baseline survey. Although deceased beneficiaries were excluded from the follow up sample, CMS includes deceased baseline respondents in the MAO files and when calculating the two-year death rate for the HOS performance measurement results. Beneficiaries who were not enrolled in their original contract when the follow-up sample was drawn are not included in the MAO files. Furthermore, beneficiaries who were not enrolled in their original contract at follow up will not have person-level performance measurement scores calculated. These beneficiaries will, however, be included as part of the analytic sample in the case-mix analysis.

The baseline and follow up survey samples were comprised of beneficiaries who completed the HOS in English, Spanish, Chinese, or Russian language versions of the mail survey. Though the Russian language option became available in 2019, no mail surveys were completed in Russian for the Cohort 25 Baseline or Cohort 25 Follow Up. For the telephone phase, a standardized version of an Electronic Telephone Interviewing System was used to collect interview data in English, Spanish, or Chinese. The Chinese language protocol was added to the HOS in 2020.

Medicare HOS Instrument

The core HOS health status items were collected with the HOS 3.0 for the 2022 Cohort 25 Baseline and the 2024 Cohort 25 Follow Up. The HOS 3.0 incorporated the Veterans RAND 12-Item Health Survey (VR-12).

Detailed information about the Medicare HOS instruments is available in the HEDIS MY 2021 and HEDIS MY 2023 Volume 6 manuals.^{2,3} Appendix A provides the data file layout by position, and the Annotated Baseline and Follow Up Survey forms showing the field names for each question are available in Appendices B and C of this DUG.

Summary Measures

VR-12

The key component of the HOS for assessment of the physical and mental health functioning is the VR-12 health survey.⁴ The VR-12 consists of 14 items, 12 of which are used in the calculation of eight health domains and two summary measures, the physical component summary (PCS) and mental component summary (MCS) scores. The VR-12 measures the same eight health domains as the 36-item health survey previously used in HOS 1.0. Each domain aggregates one or two items and all eight domains are used to calculate the two summary measures, as illustrated in Figure 1. Two of the 14 items, which ask about change in physical health and emotional health compared to one year ago, are not used in the calculation of the PCS and MCS scores. The field names for the 14 items begin with the prefix **B25VR** for the baseline, and **F25VR** for the follow up fields in the data file.

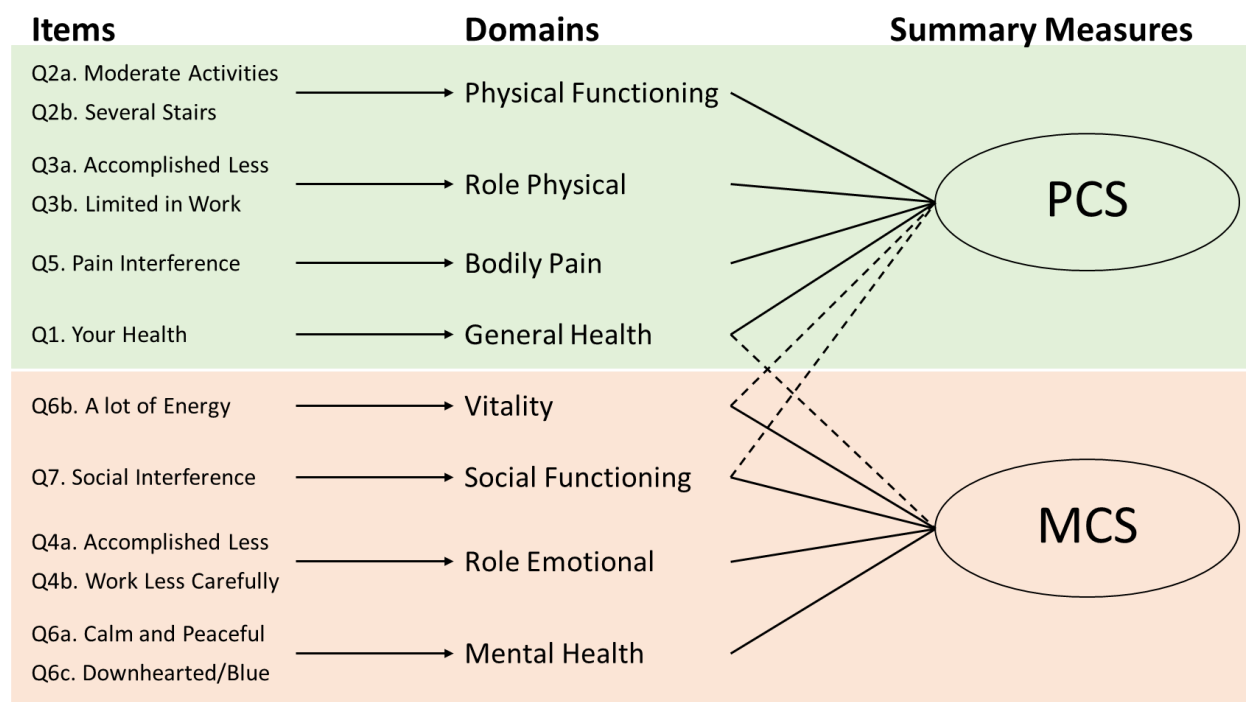

The baseline and follow up PCS and MCS scores were calculated from the VR-12 using the Modified Regression Estimate (MRE) for scoring and for imputation of missing data.⁵ These unadjusted scores are used to create the final adjusted change scores that are discussed in the Physical and Mental Component Summary Scores section. The MRE is a general method for obtaining scale scores in the context of missing data, where a different set of regression weights is applied depending on the pattern of missing item responses. With the MRE, it is possible to obtain scores for PCS alone, MCS alone, or both scores. A completed survey is defined as one that can be used to calculate at least one of the scores.

⁴ Information about the VR-36, VR-12, and VR-6D instruments is available on the Boston University School of Public Health website. The website offers details on development, applications, and references for the VR-12, which is the core health outcomes measure in the Medicare HOS and HOS-M. Figure 1: Mapping of HOS VR-12 to Eight Health Domains and Two Summary Measures

Note: Domains contributing the most to each summary measure are indicated by a solid line. Domains contributing to a lesser degree are indicated by a broken line; however, all domains contribute to some extent to the scoring of both summary measures (PCS and MCS).

Physical and Mental Component Summary Scores

For those beneficiaries with complete responses across the VR-12, the following steps were taken to calculate PCS and MCS:⁶

- Step One: New variables were created for each response level choice with one level omitted. Using the 59 total response categories across the VR-12 questions, 47 indicator variables were created.
- Step Two: Aggregate PCS and MCS scores were created separately from a regression equation that weighted each of the 47 indicator variables. The weights were derived from the Veterans SF-36 PCS and MCS Scales using the 1999 Large Health Survey of Veteran Enrollees.
- Step Three: A constant was added to each of the estimates obtained from Step Two. The scores were then standardized using normative values from a 1990 U.S. general population. Therefore, a mean score of 50 represents the national average, a 10-point difference above and below the mean score is one standard deviation, and, with few exceptions, the scores have a range of 0 through 100 (higher being better).

Available at: www.hosonline.org/globalassets/hos-online/publications/hos_veterans_12_imputation.pdf. Accessed on: April 29, 2025.

- Step Four: When a beneficiary had missing data across any of the VR-12 items, PCS and MCS scores were imputed using the MRE. Using the MRE algorithm, PCS and MCS scores can be calculated in as many as 90% of the cases in which one or more VR-12 responses are missing.⁷ Depending on the pattern of missing item responses for a beneficiary, a different set of regression weights was required to compute that individual's PCS and/or MCS scores.⁶ For each combination of missing data, the beneficiaries' data were merged with the stored regression weights and the PCS or MCS scores were computed and then standardized using the normative values from Step Three.
- Step Five: Beneficiary PCS and MCS results were mode adjusted for the impact of telephone administration compared to the reference mode of mail administration. Comparisons across the VR-12 of matched HOS and Veterans Administration surveys for the same respondents show that PCS and MCS scores are, on average, 1.9 and 4.5 points greater respectively for telephone compared to mail administered surveys.⁸ Therefore, for telephone surveys, 1.9 points were subtracted from the PCS score and 4.5 points were subtracted from the MCS score.

For the physical health summary measure, very high scores indicate no physical limitations, disabilities, or decline in well-being; high energy level; and a rating of health as "excellent." For the mental health summary measure, very high scores indicate frequent positive affect, absence of psychological distress, and no limitations in usual social and role activities due to emotional problems.

Case-mix Adjustment for Comparison of MAOs at Follow Up

The *2022-2024 Cohort 25 Performance Measurement Report* incorporates the results from the HOS 3.0 in 2022 at baseline and in 2024 at follow up. There are three possible outcomes of the performance measurement analysis: death, change in physical health (PCS score), and change in mental health (MCS score). For the HOS results, death and PCS outcomes are combined into one overall measure of change in physical health. Thus, there are two primary outcomes: (1) Alive and PCS better or same (vs. PCS worse or death) and (2) MCS better or same (vs. MCS worse). The MAO level percentages derived for these outcomes are the two HOS *Improving or Maintaining Physical Health* and *Mental Health* measures used in the Medicare Star Ratings. These outcomes are the primary outcomes of interest since health maintenance, rather than improvement, is a realistic clinical goal for many older adults. The outcomes are case mix adjusted using multivariate logistic regression models. More information about the calculation of outcomes and the Medicare Star Ratings is found in the [HOS Sample Performance Measurement Report](#).

Data File Characteristics

The 2022-2024 Cohort 25 Performance Measurement file is distributed to MAOs as a Comma Separated Values (CSV) file. The CSV file is generated using PROC EXPORT with the DBMS=CSV option in SAS Version 9.4. The first row of the file contains the SAS variable names. The file can be imported directly into MS Excel or MS Access or converted back to SAS. If converting to SAS with PROC IMPORT, it is recommended to first set the SAS system option GUESSINGROWS to a high number (valid values 1-32767) to ensure that character fields will not be truncated.

The baseline data are merged with the follow up data, so that the file contains one record per beneficiary. There are 289 fields in the MAO Cohort 25 Performance Measurement file distributed to MAOs. Fields from the baseline survey have a **B25** prefix, and fields from the follow up survey have a **F25** prefix. Fields derived at the time of the performance measurement analysis have a **P25** prefix. The Medicare Beneficiary Identifier (MBI), **AMBIDNUM**, is a unique alphanumeric identifier used to identify each beneficiary in the file and is the only field without a prefix.

Analytic Sample Definition

The Performance Measurement data file contains the records for beneficiaries in the 2022-2024 Cohort 25 Performance Measurement analytic sample, which includes all beneficiaries who meet the following criteria:

- Completed the baseline survey, where a completed survey is one for which a PCS or MCS score can be calculated (i.e., B25PCS or B25MCS not equal to missing).
- MAO still existed at the time of the follow up survey (i.e., P25CONTRACT not blank), including contracts that consolidated after the baseline survey and by December 31 of the follow up survey measurement year.
- Age 65 or older at baseline (i.e., B25AGE greater than or equal to 65).

Disabled beneficiaries under the age of 65 are not included in the analytic sample and are not part of the MAO Performance Measurement data file.

Beneficiaries in the analytic sample are classified into several categories at the time of performance measurement, as indicated by P25PMRIND. These categories include: respondents; non-respondents; ineligible beneficiaries at follow up; those who died within two years of the baseline survey; and those who voluntarily disenrolled from their MAO prior to the follow up sampling. Ineligible beneficiaries at follow up met one of the following criteria:

- Bad address and phone number
- Bad address and mail-only protocol (Russian only)
- Language barrier

Beneficiaries who disenrolled from their MAO prior to follow up sampling are included in the Cohort 25 Performance Measurement analytic sample and in the case-mix analysis. However, in accordance with CMS policy, data on those beneficiaries are not included in the MAO-level Performance Measurement data files distributed to participating MAOs.

New and Revised Fields

There was one **new** field in the 2022 Cohort 25 Baseline compared with the 2021 Cohort 24 Baseline file.

- B25GEOCAT - HOS Geographic County Designation

There were no **revised fields** in the 2022 Cohort 25 Baseline.

There were no **new** fields in the 2024 Cohort 25 Follow Up compared with the 2023 Cohort 24 Follow Up file.

There were no **revised fields** in the 2024 Cohort 25 Follow Up.

Selected field attributes (i.e., field name, type, length, or label) may have been modified for some fields included in the 2022-2024 Cohort 25 Performance Measurement data file, when compared to the same fields included in previous HOS data files. Refer to Appendix A for detailed information regarding all field attributes contained in the data file.

Excluded Fields

There were five fields excluded from the 2022 Cohort 25 Baseline data file compared with the 2021 Cohort 24 Baseline data file.

- CCARTHIP - Arthritis of hip or knee (Q28).
- CCARTHND - Arthritis of hand or wrist (Q29).
- CCSCATI - Sciatica, or pain/numbness traveling down the leg (Q31).
- SMOKE - Smoking frequency question (Q41).
- HHINC - Household Income Question (Q67).

There were no fields excluded from the 2022-2024 Cohort 25 Performance Measurement data file compared with the 2021-2023 Cohort 24 Performance Measurement data file.

Field Overview

The following is a general description of fields included in the Performance Measurement data file. The fields are listed in the order they appear in the MAO file.

Plan Level Fields (Fields 1 - 10)

Data from this section are taken from the header record of the baseline and follow up data files, as well as information obtained from the August 2024 HPMS Plan Contract List and the December 2024 *CMS Monthly Enrollment by Contract Report of Medicare Advantage/Part D Health Plans* from the CMS website (<https://go.cms.gov/mapddata>). These fields include the MAO contract number (P25CONTRACT), which was the **MAO level unit of analysis** for the 2022-2024 Cohort 25 Performance Measurement Reports.

Other fields in this section are the plan state field (P25PLANSTN), which is the two letter state abbreviation, and the CMS region code (P25PLREGCDE), which in most cases was assigned to the MAO from the HPMS Plan Contract List. Typically, plan state and CMS region designations are determined at the MAO level and are assigned to the state and region in which an MAO is reported. However, a small number of MAOs were reassigned because a majority of beneficiaries resided in a different state from the one designated in HPMS or were reassigned for consistency with previous cohorts. The reporting state field (P25RPTST) categorizes the PFFS and Regional PPO (RPPO) contracts into unique states (i.e., PFFS state = FS and RPPO state = RS) to exclude these contracts from any state level aggregate numbers, while retaining them in the national level analysis for the HOS performance measurement reporting. PFFS and RPPO plans usually include beneficiaries from several states and therefore are not reported in any state or region and are excluded from any state totals. For all other MAOs, P25RPTST has the same value as P25PLANSTN. P25RPTST was the **state level unit of analysis** for the 2022-2024 Cohort 25 Performance Measurement Report.

Survey Level Fields (Fields 11 - 213)

This section contains an anonymous beneficiary identification (ID) number (B25PATID), as well as survey information from the 62 questions at baseline and follow up comprising the HOS 3.0 instrument. The questions in this section exclude the name of the person responding to the surveys, Q62 (B25NMCOMP and F25NCOMP), which are included in the Beneficiary-Level Fields section.

Other than the anonymous beneficiary ID, the information presented in this section represents each beneficiary's actual answers to the specific questions. These data include beneficiary responses at both baseline and follow up to questions pertaining to the VR-12; ADLs; health status indicators; chronic medical conditions; depression; number of physically and mentally unhealthy days; sleep duration and quality, urinary incontinence, physical activity, falls, demographics; and who completed the survey, Q61 (B25CMPWHO and F25CMPWHO). The data include responses at baseline and follow up for questions added in 2013 about Instrumental Activities of Daily Living (IADLs), memory problems, pain, living arrangements, and the questions revised in 2013 for depression, race, Hispanic ethnicity, vision, and hearing.

The VR-12 survey portion (questions one [Q1] through seven [Q7] in the HOS 3.0 instruments) was used to obtain the physical and mental health summary scores at both baseline and follow up. The beneficiary's weight and height at baseline and follow up are obtained from open-ended questions (B25WEIGHTLB, B25HEIGHTFT, B25HEIGHTIN, F25WEIGHTLB, F25HEIGHTFT, F25HEIGHTIN).

Survey Administration Fields (Fields 214 - 226)

The fields that are presented in this section include the mode of survey administration, which indicates whether or not the beneficiary completed a baseline or follow up survey by mail or telephone (B25DISP, F25DISP), the dates the surveys were completed (B25TSRVDAT, B25TSRVDATIM, F25TSRVDAT, F25TSRVDATIM), and the language(s) in which the surveys were completed (B25SRVLANG, F25SRVLANG). The original baseline and follow up survey date fields (B25TSRVDAT, F25TSRVDAT) include the original survey dates for all beneficiaries with reported survey dates.

The imputed date fields (B25TSRVDATIM and F25TSRVDATIM) are equal to the original survey dates except in those instances where survey dates have been imputed due to missing data. For beneficiaries with missing baseline survey dates, an imputed date was used (B25TSRVDATIM); similarly, beneficiaries with missing follow up survey dates also had a date imputed (F25TSRVDATIM). The imputed dates represent the midpoint dates for each of the data collection time frames. The imputed survey dates are used to calculate age at baseline and follow up for records with missing survey dates due to non-response or ineligible surveys. The imputed survey date field (B25TSRVDATIM) in combination with the date of birth was used to derive the beneficiary's age at baseline.

The proxy status field (F25PROXST), which was assigned to beneficiaries at follow up, identifies whether a member or a proxy completed the survey at baseline and at follow up. In addition, when a proxy is identified for both surveys, this field provides information about whether the proxy is the same or a different proxy when sufficient information is available. This section also includes indicators for a member's request to be excluded from future surveys (B25EXCLUDE, F25EXCLUDE).

Physical and Mental Health Summary Measures (Fields 227 - 232)

The fields that are presented in this section include the unadjusted PCS and MCS summary measures at baseline and follow up: B25PCS, B25MCS, F25PCS, F25MCS. As previously described, the PCS and MCS scores were standardized to the U.S. population using 1990 norms. The section also includes the baseline and follow up Physical Functioning Activities of Daily Living (PFADL) scale scores (B25PFADL, F25PFADL), which were created from two physical functioning questions (Q2a and Q2b) and six ADL questions (Q10a-f). Information about the PFADL change score that is derived from the scale scores is available in the [Medicare HOS PFADL Change Measure](#) document on the HOS website.

Analytic Fields (Fields 233 - 236)

Data from this section include the beneficiary's Body Mass Index (BMI) and BMI categories at baseline (B25BMI, B25BMICAT) and follow up (F25BMI, F25BMICAT). The weight and height fields in the baseline survey were used to calculate the beneficiary's baseline BMI, while the weight and height fields at follow up were used to calculate the follow up BMI. The BMI categories were then created using the beneficiary's calculated BMI measures.

Beneficiary-Level Fields (Fields 237 - 289)

Data from this section are taken primarily from the member level record of the baseline and follow up data files. These data recorded in baseline and follow up survey administrations were obtained from a combination of CMS databases. The MBI, a unique identifier added in 2019, is included at baseline and follow up (B25MBIDNUM and F25MBIDNUM). The Analytic MBI (AMBIDNUM) was used to identify each beneficiary and was the **beneficiary-level unit of analysis** for the *Cohort 25 Performance Measurement Report*.

The PBP ID at baseline (B25PBPID) and follow up (F25PBPID) identify the plan benefit package(s) within a contract to which the beneficiary belongs. Each contract may contain one or more PBPs, and some PBPs are SNPs. The SNP type field at baseline (B25SNPTYPE) and follow up (F25SNPTYPE) identify the type of SNP PBP in which certain vulnerable beneficiaries are enrolled. Three types of special needs beneficiaries may be targeted for SNP enrollment, such as: 1) beneficiaries with severe or disabling chronic conditions, 2) dually-eligible members, and 3) the frail elderly who live in specific types of institutions. Further information about SNPs, such as contract number, contract name, plan ID, enrollment, and type of medical condition(s) served, may be obtained from the [SNP Comprehensive Report](#).

Beneficiary addresses (mailing address, county, state, and ZIP Code), phone numbers, race, sex, date of birth, and reason for entitlement from baseline and follow up are included in this section. The ESRD, Hospice, Medicaid, Dual, and Institutional Status indicators at baseline and follow up are also included. The beneficiary's date of death field (P25THDOD) was updated from the CMS databases in January 2025 to include available death dates. The beneficiary's baseline date of birth (B25TDOB), in combination with the baseline imputed survey date field (B25TSRVDATIM), was used to derive the beneficiary's age at baseline (B25AGE). This age field was used in the HOS performance measurement analysis.

The performance measurement analytic sample distribution indicator (P25PMRIND) identifies respondent, non-respondent, ineligible, deceased, and disenrolled beneficiaries. Beneficiaries who had voluntarily disenrolled from their original MAO at the time of the follow up sampling are not included in the MAO files; however, they are included in the calculation of the performance measurement results that appear in the *2022-2024 Cohort 25 Performance Measurement Reports*.

Data Field Utilization Notes

- The HOS questionnaire contains multiple skip patterns. Exercise caution when interpreting responses from questions that involve skip patterns, as not every beneficiary is asked the question. The skip patterns are indicated on the survey instruments in Appendices B and C.
- Some demographic fields (race and sex) are obtained both from CMS databases at the baseline and follow up samplings and also from the data provided by the respondent from each survey. Some inconsistencies exist between the CMS fields and the corresponding respondent survey data. Exercise caution when examining these fields.
- For the calculation of performance measurement results, beneficiaries are considered deceased if they died within two years of completing the baseline survey and did not complete a follow up survey. The performance measurement analytic sample distribution indicator (P25PMRIND) can be used to identify the status of each beneficiary in the MAO file.
- Some question numbers from the follow up survey may differ from the baseline survey, as well as from previous MAO Performance Measurement data files. Exercise caution when examining the data across multiple cohorts.

Timeline of Survey Modifications

- Beginning with the 2010 HOS Survey, permanent HOS survey vendor IDs were assigned. The assignments in this file (B25VENDOR, F25VENDOR), are consistent across the survey years for each survey vendor since the 2010-2012 Cohort 13 merged data. Consult the fields in Appendix A for the participating survey vendors.
- Beginning with the 2013 HOS 2.5, two depression screening questions from the Patient Health Questionnaire-2 (PHQ-2) replaced the questions that served as the depression screening measure in previous versions of the HOS (DEPNOPLS, DEPDOWN). Due to the change, estimates of the proportion with positive depression screens derived from the 2013 and subsequent surveys are not comparable to estimates produced using past HOS versions. A description of the depression screen is available in the glossary, which is accessible from the Glossary link at the bottom of the HOS site webpages.
- Beginning with the 2013 HOS 2.5, three questions recognized as Patient-Reported Outcomes Measurement Information System (PROMIS) pain items were added to the HOS questionnaire. These questions measure self-reported pain over the previous seven days. PAINDACT asks how much pain interfered with day-to-day activities from 1 (“Not at all”) to 5 (“Very much”), and (PAINSACT asks how often pain kept the member from socializing from 1 (“Never”) to 5 (“Always”). Both questions (Q33 and Q34) have five possible categorical responses. PAINRATE (Q35) asks the member to rate his/her average pain, ranging from 0 (“No pain”) to 10 (“Worst imaginable pain”). The response options for PAINRATE were changed in 2021 to span from 0 to 10. Prior to 2021, this scale ranged from 1-10, and the “No Pain” response is not comparable to earlier surveys.

- Beginning with the 2017-2019 HOS Cohort 20 merged file, the baseline and follow up fields for BMI category (B25BMICAT and F25BMICAT) were modified. Underweight category was changed from “<20” to “<18.5” and Normal weight category was changed from “20 to 24.99” to “18.5 to 24.99.” Morbid obesity was combined with Obesity into one category (“≥30”). Due to the modifications, the category percentages for Cohort 20 and subsequent cohorts are not comparable to percentages produced for past cohorts.
- Beginning with the 2018-2020 HOS Cohort 21 merged file, two derived fields were added for inclusion in the beneficiary-level data (B25HISPANA and F25HISPANA). These fields are indicators for Hispanic ethnicity that are used for the Performance Measurement analyses. The baseline and follow-up HISPANA variables are derived from the multiple response categories in Question 53a-e. HISPANA=1 indicates Hispanic ethnicity if the beneficiary selects one or more Hispanic categories in Q53b-e (HPMEX, HPPR, HPCUBA, and/or HPOTHER=1) and does not select “No, not Hispanic, Latino/a or Spanish origin” in Q53a (HPNOHISP=0). HISPANA=2 indicates the beneficiary selects “No, not Hispanic, Latino/a or Spanish origin” (HPNOHISP=1) and all categories of Q53b-e=0.
- Beginning with the 2020 HOS 3.0, the SPEAKLNG field (Q55a) was revised to add a Russian language option. The baseline and follow up responses of 4 (“Some other language”) were revised to 4 (“Russian”) and 7 (“Some other language”). Responses for 1 (“English”), 2 (“Spanish”), and 3 (“Chinese”) did not change.

Appendix A: Performance Measurement Data File Specifications

The following table describes the field attributes for the 2022-2024 Cohort 25 Performance Measurement data file. The fields are sorted in the order they appear in the **MAO file**.

The “Comments” column indicates where the field was obtained, and if applicable, how it was derived. Fields obtained directly from the HOS instrument are so indicated. For the survey level items, the exact text of each question can be obtained from Appendices B and C, or by referring to the HEDIS MY 2021 and HEDIS MY 2023, Volume 6 manuals.^{2,3}
