Medicare Health Outcomes Survey Limited Data Sets

File Specifications for *Cohorts 14, 15, 16 and 17* (Plan Fields Removed)

MEDICARE HOS LIMITED DATA SETS OVERVIEW

The Medicare HOS is the first patient-reported outcomes measure used in Medicare managed care. The goal of the Medicare HOS program is to gather valid and reliable clinically meaningful data. These data have many uses, such as targeting quality improvement activities and resources; monitoring health plan performance and rewarding top-performing health plans; helping beneficiaries make informed health care choices; and advancing the science of functional health outcomes measurement. Managed care plans with Medicare Advantage (MA) contracts must participate. Several types of Medicare HOS data files are available for research purposes. Medicare HOS data files are available as public use files (PUFs), limited data sets (LDSs), and research identifiable files (RIFs).

The HOS LDS files are comprised of the entire national sample for a given cohort. This includes respondents and non-respondents; senior and disabled beneficiaries; and quality reporting and voluntary reporting samples. All baseline and follow up survey items are included, as well as calculated fields: however, the reporting unit (contract number) information has been modified. **Beginning in 2017, plan contract numbers were blinded in the LDS and certain plan level fields were removed (i.e., plan name) or modified (i.e., categorical enrollment) to prevent identification of individual health plans. Researchers who require these plan identifiers should request a RIF, as described below.** The LDS retains some protected beneficiary-level health information from the RIF, such as date of birth and date of death; however, specific direct person identifiers (i.e., beneficiary name, Medicare health insurance claim [HIC] number, the CMS beneficiary link key, social security number [SSN], phone number, and street address) are not included in the LDS files. The files are SAS¹ data sets and were generated with SAS Version 9.2 for *Cohort 14*, and SAS Version 9.3 for *Cohorts 15, 16, and 17*.

A signed Data Use Agreement with CMS is required to obtain an LDS or RIF data file. Effective September 1, 2016, all research requests for LDS files must be submitted through the CMS LDS File Process, while the requests for RIF files will continue to be processed through the Research Data Assistance Center (ResDAC) at the University of Minnesota. ResDAC is the CMS contractor that provides assistance to academic, government and non-profit researchers interested in using Medicare and/or Medicaid data. ResDAC is available to assist in the completion and/or review of requisition forms for Medicare HOS RIF data files prior to their submission to CMS. For additional information and assistance with obtaining Medicare HOS LDS files, go to the [Research Data Files](#) section on the Data page of the HOS website. For more information about obtaining the RIFs, please visit the ResDAC HOS web page (<http://www.resdac.org/cms-data/file-family/Health-Outcomes-Survey-HOS>). ResDAC may also be contacted by calling 1-888-

¹ SAS[®] is a registered trademark of the SAS Institute Inc., Cary, NC.

9RESDAC (1-888-973-7322) between the hours of 8:30 AM and 4:30 PM CST Monday through Friday or by emailing resdac@umn.edu.

MEDICARE HOS VERSIONS

In 2013, CMS adopted HOS version 2.5. Consequently, the *2011-2013 Cohort 14* and *2012-2014 Cohort 15* used HOS 2.0 at Baseline and HOS 2.5 at Follow Up. In 2015, CMS adopted HOS version 3.0. Therefore, the core HOS health status items were collected with the HOS 2.5 for the *2013 Cohort 16* and *2014 Cohort 17* at Baseline and with the HOS 3.0 for the *2015 Cohort 16* and *2016 Cohort 17* at Follow Up. HOS versions 2.0, 2.5, and 3.0 are based on the Veterans RAND 12-Item Health Survey (VR-12). The 12-item health survey portion (questions one [Q1] through seven [Q7] in the HOS 2.0 and subsequent instruments) was used for calculation of the physical component summary (PCS) and mental component summary (MCS) scores at baseline and follow up.

The HOS 2.5 included new questions about instrumental activities of daily living (IADLs), memory problems, pain, and living arrangements, and revised questions for depression, race, Hispanic ethnicity, vision and hearing. Depression was also added to the list of chronic conditions, resulting in 15 conditions being assessed at Follow Up, compared to 14 at Baseline for *Cohorts 14* and *15*, and at both time points for *Cohort 16* and *17*. Several questions from HOS 2.0 were also removed in HOS 2.5. The HOS 3.0 included new questions about the average number of hours of sleep during the past month, overall sleep quality over the past month, other language spoken at home (specify), and revised questions about leaking of urine changing daily activities or interfering with sleep, and the language mainly spoken at home.

LIMITED DATA SETS STRUCTURE

Fields in the LDS files were collected at three different time points: baseline, follow up, and performance measurement. The information from all three time points was merged into one observation per beneficiary, and a prefix assigned to each field name to identify the time point. All fields obtained or derived from the baseline survey have a “B” prefix, all fields obtained or derived from the follow up survey have an “F” prefix, and all performance measurement fields, which were calculated or retrieved from other data sources, have a “P” prefix. The performance measurement fields provide characteristics of the beneficiary and the beneficiary’s health plan at the time of performance measurement reporting, which occurs approximately one year after follow up data collection.

Beginning in the Cohort 14 LDS, there are two fields (BxHOSQRS, FxHOSQRS) that identify FIDE SNP plan benefit packages (PBPID) which are voluntarily reporting HOS for calculation of the contract-level frailty adjustment factor based on the six activities of daily living (ADLs) in the HOS. At baseline, BxHOSQRS=1 for beneficiaries in MAOs that are part of the quality reporting sample and BxHOSQRS = 0 for beneficiaries in MAOs that are voluntarily reporting HOS for frailty assessment only. At follow up, FxHOSQRS=1 for all beneficiaries. In the field names above, and elsewhere in this document, the “x” following the prefix represents the cohort identifier (14, 15, 16, or 17).

LIMITED DATA SET FILE SPECIFICATIONS TABLE DESCRIPTION

The File Specifications Table in this document describes the file layout by field position for *Cohorts 14, 15, 16, and 17* LDS files. The table has one row per field. The columns provide the field name/description, type, length, and additional information (including valid values where applicable). There is also a column for each cohort: **B14F14** for *Cohort 14*, **B15F15** for *Cohort 15*, **B16F16** for *Cohort 16*, and **B17F17** for *Cohort 17*. The survey question number is printed in the corresponding row under the column heading for each cohort where the question was asked. Check marks in these columns indicate the presence of non-survey items, such as administrative and analytic fields. **Shaded rows indicate fields which were removed to prevent identification of individual health plans.**

Note that the question numbers may change from cohort to cohort and between the baseline and follow up surveys. For example, in the *Cohort 14* LDS file the baseline survey field B14EDUC was Q60 in the 2011 HOS questionnaire, and the corresponding follow up survey field F14EDUC was Q63 in the 2013 HOS questionnaire. The question text, valid values, and skip patterns in this document are from the most recent HOS questionnaire in which the question appears, unless otherwise noted. The exact text of each question for each survey year can be obtained by referring to the HEDIS[®] Manuals or to the questionnaires on the <http://www.hosonline.org> website.²

The field name and attributes in the File Specifications Table correspond to the *Cohorts 14, 15, 16, and 17* LDS files only and may differ from previous LDS files derived from the HOS 1.0 questionnaire or earlier versions of the HOS 2.0 questionnaire. The File Specifications documents for all prior HOS cohorts are available in the Research Data Files section of the HOS website.

SUMMARY OF LDS FILES

	Cohort 14		Cohort 15		Cohort 16		Cohort 17	
Year	2011	2013	2012	2014	2013	2015	2014	2016
Time Point	Baseline	Follow Up	Baseline	Follow Up	Baseline	Follow Up	Baseline	Follow Up
HOS Version	2.0	2.5	2.0	2.5	2.5	3.0	2.5	3.0
No. of Survey Questions	64	72	64	66	66	68	66	68
